Avery Lin

Machine Learning Engineer · LLM Serving & RAG

Austin, TX · avery.lin@example.com · github.com/avery-lin-example

SUMMARY

Machine learning engineer with 4 years of experience putting models into production. I run open-weight LLMs on a shared GPU cluster and build retrieval-augmented chatbots that answer from internal documents and cite their sources. At this conference I want to learn how teams autoscale model servers and cut GPU costs, compare vector search tools, and meet people building RAG in production.

EXPERIENCE

Machine Learning Engineer — Halcyon Ridge AI 2024 – Present

- Serve open-weight LLMs on a shared Kubernetes GPU pool with request batching, tripling throughput.
- Built a RAG assistant over 20,000 internal runbooks that cites its sources; cut wrong answers by half with a reranker.
- Set up autoscaling for model servers so traffic spikes no longer cause timeouts.

Data Scientist — Northwind Parcel 2021 – 2024

- Built demand forecasting models for delivery volumes using weather and holiday signals.
- Moved notebooks into tested Python services with CI and monitoring.

SKILLS

ML: LLM serving, RAG, embeddings, rerankers, evaluation · **Platform:** Kubernetes, GPUs, autoscaling, Docker · **Search:** vector search, hybrid search · **Languages:** Python, SQL

OPEN SOURCE & COMMUNITY

- Contributor to an open-source LLM evaluation toolkit (fictional project).
- Organizes a monthly applied-AI reading group.

EDUCATION

M.S. Data Science — Westlake Institute of Technology 2021
